Date:	05/06/2013
ECO :	00593

1. Engineering Specification 4-POST SAFETY DECAL Detailed Description: SiZE: 23" L x 4" W (584m x 100mm)

2. Vendor Information					
Approved Vendor	Vendor Part #	Contact #	Preferred Vendor		
1)					

VISUALLY CONFIRM THAT ALL PRIMARY SAFETY LOCKS ARE ENGAGED BEFORE ENTERING WORK AREA.

Suspension components used on this lift are intended to raise and lower lift only and are NOT meant to be load-holding devises. Remain clear of elevated lift unless visual confirmation is made that all primary safety locks are fully engaged and the lift is LOWERED onto the safety locks. Refer to installation/operation manual for proper safety lock procedures and/or further instruction.

AWARNING

WIRE ROPE INSPECTION AND MAINTENANCE

- Lifting cables should be replaced every (3) three years or when visible signs of damage are apparent. DO NOT USE LIFT WITH DEFECTIVE OR WORN CABLES.
- Wire rope should be maintained in a well-lubricated condition at all times. Wire rope is only fully protected when each wire strand is lubricated both internal and external. Excessive wear will shorten the life of the wire rope. The factory suggests wire rope lubricant that penetrates to the core of the rope and provides long-term lubrication between each individual strand. In order to make sure that the inner layers of the rope remain well lubricated, lubrication should be carried out at intervals not exceeding three (3) months during operation.
- All sheaves and guide rollers in contact with the moving wire rope should be given regular visual checks for surface wear and lubricated to make sure that they run freely. This operation should be carried out at appropriate intervals generally not exceeding three (3) months during operation. For all sheave axles, the factory recommends standard wheel bearing grease. For all sheaves and/or guide rollers, the factory recommends 90-WT gear oil or similar heavy lubricant applied by any method including pump/spray dispensing, brush, hand and/or swabbing.

Failure to read, understand and follow these instructions may cause death or serious injury. Read and understand these instructions

before using lift.

IMPORTANT OPERATION / MAINTENANCE INSTRUCTIONS - PLEASE READ

TO RAISE LIFT

- Position vehicle tires at the center of each runway.
- \checkmark Set parking brake or use wheel chock to hold vehicle in position.
- Before raising vehicle, be sure all personnel are clear of lift and surrounding area. Pay careful attention to overhead clearances.
- ✓ Raise lift to desired height by pressing push button on power unit.
 ✓ Maintain visual contact with vehicle and surrounding area at all times while lowering lift.
- ✓ STOP IMMEDIATELY if load shifts or becomes unlevel.
- ✓ After vehicle is raised to desired height, lower lift onto the nearest safety lock. Do not allow cables to become excessively slack.
- ✓ ALWAYS INSURE ALL PRIMARY SAFETY LOCKS ARE ENGAGED before entering work area.

TO LOWER LIFT

- ✓ Before lowering vehicle, be sure all personnel, tools and equipment are clear of lift and surrounding area.
- Raise lift by pressing RAISE BUTTON on power unit. Elevate lift at least two inches to allow adequate clearance for locks to clear.
- Press push button AIR SAFETY VALVE and HOLD.
- ✓ Lower vehicle by pressing power unit lowering handle until lift has descended completely.
- When lowering lift PAY CAREFUL ATTENTION that all personnel and objects are kept clear.
- ✓ ALWAYS keep a visual line of site on lift AT ALL TIMES.
- ✓ ALWAYS make sure that ALL LOCKS are disengaged. If one of the locks inadvertently engages on descent, lift and/or vehicle may disrupt causing personal injury or death.

REQUIRED MONTHLY MAINTENANCE

- ✓ ALWAYS consult operation manual for factory recommended maintenance.
- Adjust lift cables to ensure lift raises level and safety locks engage simultaneously.
- Check all chain/cable connections, bolts and pins to insure proper mounting.
- ✓ Visually inspect safety locks for proper operation.
- ✓ Visually inspect concrete floor. DO NOT USE LIFT if concrete foundation shows signs of deterioration.
- ✓ Inspect all anchor bolts and retighten if necessary.
- ✓ Check columns for squareness and plumb.
- ✓ Inspect all bolts and/or fasteners making sure they are properly secured.
- ✓ Make a visual inspection of ALL MOVING PARTS and check for excessive signs of wear.
- ✓ Replace ALL FAULTY PARTS before lift is put back into operation.

A WARNING

- 1. WARNING: If cement anchor bolts are loose, or any component of the lift is found to be defective, DO NOT USE LIFT!
- 2. Never operate the lift with any person or equipment below.
- 3. Never exceed rated capacity.
- 4. Always insure safety locks are engaged before any attempt is made to work on or near vehicle.
- 5. Never leave lift in an elevated position unless the safety locks are engaged.
- Do not permit electric motor to get wet! Motor damage caused by dampness is not covered under warranty.

HDS-14 Packaging

This report is intended to show how to package an HDS-14

Report taken by: Adam Roberts Date: 10/9/15

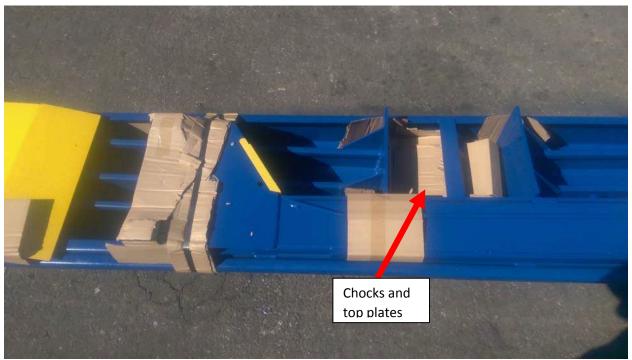

Power side ramp will have: 1 crosstube, 1 parts box, cylinder installed and safety ladders.

Offside ramp will have: 1 crosstube 2 approach ramps, 4 posts, 4 top plates, 2 tire stops and 2 tire chocks.

2 posts will be positioned opposite of each other with 2 approach ramps on top. Note that there is cardboard in-between each spot where the parts contact each other. They are then secured with a steel strap.

The crosstube will positioned as shown with the tire stops, top plates and tire chocks packaged in the middle.

Power side ramp will have 4 safety ladders fully wrapped in plastic with cardboard where it contacts to ramp.

The parts box will be placed in the center in front of the cylinder. Then the crosstube Is placed on top and secured with a steel strap

Once all items are secure, each section is wrapped with cardboard.

Thicker cardboard is then added to the bottom and both sides and secured with plastic straps. We are using a one piece cardboard that has folds for the sides.

Shown is all the thicker cardboard pieces added.

Finally fully wrap in plastic.

Here is the lift complete and stacked.
